

Manufacturing Capabilities

NIFTY-BAR, INC.

For more than 30 years, Nifty-Bar, Inc. has provided precision ground flat metal products and specialized manufacturing services for fast and economical production of precision mechanical components in prototype through production quantities. We have complete capabilities for:

- Flame Cutting
- Plasma Cutting
- Precision Saw Cutting
- Blanchard Grinding
- Double Disc Grinding
- Edge Grinding
- Surface Grinding
- Duplex Milling
- Abrasive Waterjet Cutting and Machining

Grinding Services

Nifty-Bar, Inc. specializes in blanchard, double disc, and surface grinding applications. Contact us at the design stage for expert assistance in selecting the best manufacturing technologies for your projects. And choose Nifty-Bar, Inc. as your preferred supplier for grinding related services.

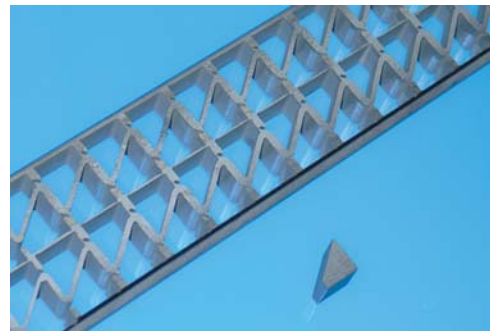

Material Flexibility

Nifty-Bar, Inc. can produce your products in aluminum, cast iron, composites, copper, steel, stainless steel, titanium, and many other types of materials. We can provide traceable raw materials and blanks to your exact specifications through our network of qualified suppliers. We can also process customer supplied blanks, castings, forgings, and weldments as required for your projects.

Abrasive Waterjet Services

Waterjet technology makes it possible to produce products without heat affected zones in materials that are unsuitable for flame or plasma cutting. Our abrasive waterjet machining services can provide your company with precision blanks, near net shape parts, or finished components that are ready for use.

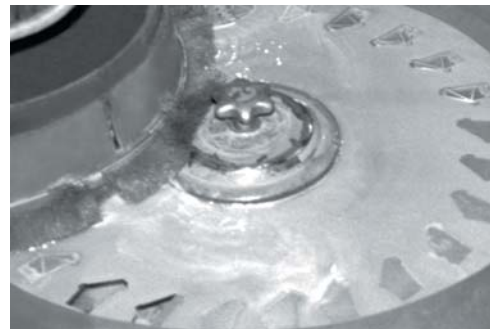

Cutting Services

Our material cutting services are provided through manual or semi-automatic saws and through CNC controlled flame, plasma, or abrasive waterjet cutting equipment. For CNC applications, part programs can be created from original drawings or directly from customer supplied DWG or DXF files.

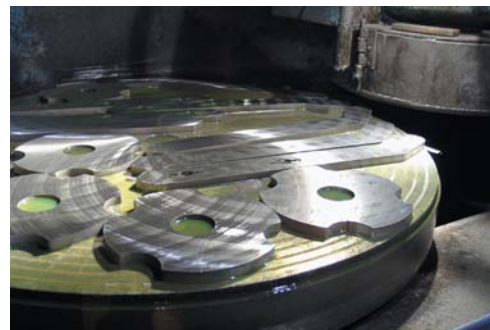

Finishing Operations

Nifty-Bar, Inc. can provide deburring, tumbling, bead blasting, heat treatment, cleaning, plating, and many other types of post processing or finishing operations as required for your products.

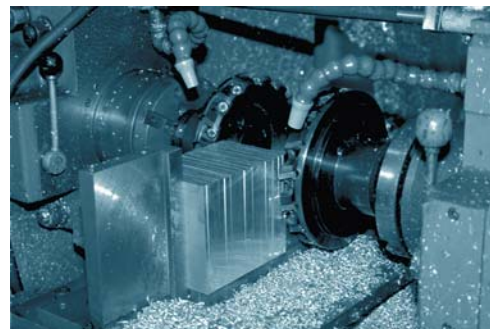

Premachined Blanks

The unique combination of our grinding, sawing, and duplex milling capabilities makes it possible to provide economical 6-sided machined blanks for significant time savings in your CNC applications.

Precision Ground Stock

Nifty-Bar, Inc. maintains a large inventory of low carbon steel precision blanchard ground flat stock suitable for use in a wide variety of applications. Please see our Precision Ground Products data sheet for complete details.
